

ALESSANDRA TURI

Alessandra Turi is a senior research at MAR.TE. S.c.ar.l. where she carries out research activities in the port logistics and transport sectors with a particular reference to process management and analysis of supporting technologies. She has gained experience in this field thanks to the collaboration, as a research fellow, with the Department of Management and Quantitative Studies of University of Naples "Parthenope", where she has developed research products and participated in the drafting and development of projects on

environmental management in the port sector, with a particular focus on technologies for the installation of refueling points for alternative fuels in port sites.

Alessandra Turi is an Automation Engineer and has attended the training course provided by the "Smart tunnel" project, obtaining the qualification of Expert in Transport Logistics.
